Reply to Office Action Dated March 15, 2010

Amendments to the Specification:

Please replace the Abstract paragraph on page 1 with the following amended paragraph:

A caliper (1) for a disc-brake comprises includes two side walls (2) at a distance from

each other which delimit a space (3) to accommodate a portion of a brake disc in which one of

said the two side walls (2) comprises means (4) for attaching the caliper (1) to a vehicle so that it

is integral in rotation and in translation. The side walls (2) are connected to each other by means

of a connecting structure (5) which straddles the disc space (3). Each of the side walls (2)

delimits at least one seating (6) capable of accommodating a pad (7) and Tthe caliper (1)

comprises a thrust means (8) to clamp the pads (7) against the brake disc, in which. Ithe thrust

means (8) are is secured to the side walls (2) in such a way that the latter side walls absorb the

entire clamping force and the seatings (6) are capable of securing the pads (7) in such a way so

that the side walls (2) also absorb the entire braking moment applicable by the pads (7) to the

brake disc by friction. The connecting structure (5) comprises one or more arc-shaped shells (10,

11), are shaped or arranged along an are; connected so as to be integral with both the side walls

(2) along one of their outer circumferential edges (12) and. Tthe slenderness of these one more

shells (10, 11) expressed as the ratio of thickness to circumferential extension relative to an axis

of rotation of the brake disc is less than 17/100.

(Figure 1)

Application No. 10/584,694

Amendment Dated: July 15, 2010

Reply to Office Action Dated March 15, 2010

Please replace paragraph [0025] with the following amended paragraph:

[0025] The slenderness of the entire connecting structure 5, formed by said one or more shells 10, 11, including the through openings 13, 14, expressed as the ratio of thickness to circumferential extension relative to the axis of rotation of the brake disc is advantageously between 2/100 and 4/100, preferably approximately 3/1050
